

Tips to banish

# BATHROOM GERMS

- 1** Practice the usual hygiene routine of washing your hands for 20 seconds.
  - 2** Pull the toilet seat cover down before flushing if there is one available.
  - 3** Keep toothbrushes far away from the toilet to avoid any airborne particles from coming into contact with them.
  - 4** Clean and disinfect bathrooms at home regularly, but consider cleaning them more frequently if someone in the household is sick.
  - 5** When using public restrooms without toilet covers, try not to bring any food or drinks into the bathroom stall with you.
